Objective

To work in an environment that encourages me to succeed and grow professionally and where I can utilize my skills and knowledge appropriately.

Projects

✓ **Get the result of all students using Web Scraping and Automation.**

This project aims to get the result of all the students one goes instead of getting them one by one. and also stores those marks in an excel file

➢ Link: Result_automation_system (github.com)

✓ **Personal computer Assistant**

The virtual assistant is a general-purpose desktop-based application software, that understands voice commands and completes tasks or replies to queries said by the user.

➢ Link: PC_assistant (github.com)

✓ **Car price Prediction**

Develop and train the linear regression model using the training dataset. I created this project during my data science internship
